Chemistry and Physics of Lipids, 54 (1990) 239—241
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 54 (1990)

1-alkyn-3-ols, yeast, lipase, enzymatic resolution, leukotrienes, 43
alkali metals, calcium, phosphatidate, ionophore, 221
alkylglycerophospho-L-serine analogs, alkylglycerophosphoric ester analogs, phospholipase D, fast atom bombardment mass spectrometry, cytostatic activity, 89
alkylglycerophosphoric ester analogs, alkylglycerophospho-L-serine analogs, phospholipase D, fast atom bombardment mass spectrometry, cytostatic activity, 89
asymmetric synthesis, lipase, diastereomer, NMR, 205

biosynthesis, deuterated polyunsaturated fatty acids, ^{13}C-NMR, 17
branched and unbranched phosphatidylcholines, phase diagrams, differential scanning calorimetry, miscibility gap, 61
branch methyl groups, diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, molecular order, dynamics, 115

calcium, phosphatidate, ionophore, alkali metals, 221
calorimetry, freeze-fracture electron microscopy, phase transitions, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylethanolamine, ion interaction, 181
chemical shift anisotropy, ^{31}P-NMR, low density lipoprotein-heparin complexes, lateral diffusion coefficients, core monolayer interactions, light scattering, 9
cholesterol, phospholipid, phase transitions, X-ray diffraction, membranes, 147
core monolayer interactions, ^{31}P-NMR, low density lipoprotein-heparin complexes, lateral diffusion coefficients, chemical shift anisotropy, light scattering, 9
corn oil, lipid diet, salmon oil, microsomal membrane, fluidity, order parameter, 25
Corynebacterium, *O*-peracetylmonomycoloylglycerol, monoacylglycerol, mass spectrometry, *Rhodococcus*, 215
cytostatic activity, alkylglycerophospho-L-serine analogs, alkylglycerophosphoric ester analogs, phospholipase D, fast atom bombardment mass spectrometry, 89

deuterated polyunsaturated fatty acids, biosynthesis, ^{13}C-NMR, 17
deuterium labeling, phosphatidylserine, pH dependence, ^{2}H-NMR, hexagonal H_{II} phase, 33
deuterium NMR spectroscopy, lysolecithin, DPPC, magnetic alignment, 157
diastereomer, asymmetric synthesis, lipase, NMR, 205
differential-scanning-calorimetry, *N*-methylated phosphatidylethanolamines, mixing properties, phase diagrams, phase separation, 171
differential scanning calorimetry, phase diagrams, branched and unbranched phosphatidylcholines, miscibility gap, 61
differential scanning densitometry, phosphatidylethanolamines, specific volumes, phase transitions, expansion coefficients, volume changes, 67
dihexadecylglycerol phospholipids, diphytanylglycerol phospholipids, molecular order, dynamics, branch methyl groups, 115
dipalmitoylphosphatidylcholine, calorimetry, freeze-fracture electron microscopy, phase transitions, dipalmitoylphosphatidylethanolamine, ion interaction, 181
dipalmitoylphosphatidylethanolamine, calorimetry, freeze-fracture electron microscopy, phase transitions, dipalmitoylphosphatidylcholine, ion interaction, 181
diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, molecular order, dynamics, branch methyl groups, 115
docosahexaenoic acid, linolenic acid, phospholipid bilayers, fluidity, fusion, permeability, 79
DPPC, lysolecithin, deuterium NMR spectroscopy, magnetic alignment, 157
dynamics, diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, molecular order, branch methyl groups, 115

electron spin resonance, spin trapping, retinyl derivatives, ionyl derivatives, 73
enzymatic resolution, yeast, lipase, 1-alleyn-3-ols, leukotrienes, 43
ether lipid, phospholipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocoline, ^{2}H-labeled ether lipid, ^{13}C-labeled ether lipid, 49
expansion coefficients, phosphatidylethanolamines, specific volumes, phase transitions, differential scanning densitometry, volume changes, 67

fast atom bombardment mass spectrometry, alkylglycerophospho-L-serine analogs, alkylglycerophosphoric ester analogs, phospholipase D, cytostatic activity, 89
fluidity, linolenic acid, docosahexaenoic acid, phospholipid bilayers, fusion, permeability, 79

fluidity, lipid diet, corn oil, salmon oil, microsomal membrane, order parameter, 25
freeze-fracture electron microscopy, calorimetry, phase transitions, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylethanolamine, ion interaction, 181
freeze-fracture electron microscopy, liposomes, non-bliayer phases, hexagonal phases, X-ray diffraction, 193
fusion, linolenic acid, docosahexaenoic acid, phospholipid bilayers, fluidity, permeability, 79

sn-glycero-3-phosphocoline, ether lipid, phospholipid, *sn*-glycero-3-phosphoethanolamine, 2H-labeled ether lipid, ^{13}C-labeled ether lipid, 49
sn-glycero-3-phosphoethanolamine, ether lipid, phospholipid, *sn*-glycero-3-phosphocoline, ^{2}H-labeled ether lipid, ^{13}C-labeled ether lipid, 49
glycosaminoglycans, phosphatidylcholine, liposomes, microelectrophoresis, 1

hexagonal H_{II} phase, phosphatidylserine, pH dependence, deuterium labeling, ^{2}H-NMR, 33
hexagonal phases, liposomes, non-bliayer phases, X-ray diffraction, freeze-fracture electron microscopy, 193

ionophore, calcium, phosphatidate, alkali metals, 221
ionyl derivatives, electron spin resonance, spin trapping, retinyl derivatives, 73
ion interaction, calorimetry, freeze-fracture electron microscopy, phase transitions, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylethanolamine, 181

^{13}C-labeled ether lipid, ether lipid, phospholipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocoline, ^{2}H-labeled ether lipid, 49
^{2}H-labeled ether lipid, ether lipid, phospholipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocoline, ^{13}C-labeled ether lipid, 49
lateral diffusion coefficients, ^{31}P-NMR, low density lipoprotein-heparin complexes, core monolayer interactions, chemical shift anisotropy, light scattering, 9
leukotrienes, yeast, lipase, enzymatic resolution, 1-alleyn-3-ols, 43
light scattering, ^{31}P-NMR, low density lipoprotein-heparin complexes, lateral diffusion coefficients, core monolayer interactions, chemical shift anisotropy, 9
light scattering, phospholipid vesicle formation, 131
linolenic acid, docosahexaenoic acid, phospholipid bilayers, fluidity, fusion, permeability, 79
lipase, asymmetric synthesis, diastereomer, NMR, 205
lipase, yeast, enzymatic resolution, 1-alleyn-3-ols, leukotrienes, 43
lipid diet, corn oil, salmon oil, microsomal membrane, fluidity, order parameter, 25
liposomes, glycosaminoglycans, phosphatidylcholine, microelectrophoresis, 1
liposomes, non-bliayer phases, hexagonal phases, X-ray diffraction, freeze-fracture electron microscopy, 193
low density lipoprotein-heparin complexes, ^{31}P-NMR, lateral diffusion coefficients, core monolayer interactions, chemical shift anisotropy, light scattering, 9
lysolecithin, DPPC, deuterium NMR spectroscopy, magnetic alignment, 157

magnetic alignment, lysolecithin, DPPC, deuterium NMR spectroscopy, 157
mass spectrometry, *O*-peracetylmonomycoloylglycerol, monoacylglycerol, *Corynebacterium, Rhodococcus,* 215
membranes, phospholipid, cholesterol, phase transitions, X-ray diffraction, 147
N-methylated phosphatidylethanolamines, differential-scanning-calorimetry, mixing properties, phase diagrams, phase separation, 171
microelectrophoresis, glycosaminoglycans, phosphatidylcholine, liposomes, 1
microsomal membrane, lipid diet, corn oil, salmon oil, fluidity, order parameter, 25
miscibility gap, phase diagrams, branched and unbranched phosphatidylcholines, differential scanning calorimetry, 61
mixing properties, differential-scanning-calorimetry, *N*-methylated phosphatidylethanolamines, phase diagrams, phase separation, 171
molecular order, diphytanylglycerol phospholipids, dihexadecylglycerol phospholipids, dynamics, branch methyl groups, 115
monoacylglycerol, *O*-peracetylmonomycoloylglycerol, mass spectrometry, *Corynebacterium, Rhodococcus,* 215

^{13}C-NMR, biosynthesis, deuterated polyunsaturated fatty acids, 17
^{13}C-NMR, ^{1}H-NMR, ^{31}P-NMR, phosphatidylcholines, thiophosphatidylcholines, phospholipids, 99
^{1}H-NMR, ^{13}C-NMR, ^{31}P-NMR, phosphatidylcholines, thiophosphatidylcholines, phospholipids, 99
^{2}H-NMR, phosphatidylserine, pH dependence, deuterium labeling, hexagonal H_{II} phase, 33
^{31}P-NMR, ^{1}H-NMR, ^{13}C-NMR, phosphatidylcholines, thiophosphatidylcholines, phospholipids, 99
^{31}P-NMR, low density lipoprotein-heparin complexes, lateral diffusion coefficients, core monolayer interactions, chemical shift anisotropy, light scattering, 9
NMR, asymmetric synthesis, lipase, diastereomer, 205
non-bliayer phases, liposomes, hexagonal phases, X-ray diffraction, freeze-fracture electron microscopy, 193

order parameter, lipid diet, corn oil, salmon oil, microsomal membrane, fluidity, 25
O-peracetylmonomycoloylglycerol, monoacylglycerol, mass spectrometry, *Corynebacterium, Rhodococcus,* 215

permeability, linolenic acid, docosahexaenoic acid, phospholipid bilayers, fluidity, fusion, 79

phase diagrams, branched and unbranched phosphatidylcholines, differential scanning calorimetry, miscibility gap, 61
phase diagrams, differential-scanning-calorimetry, *N*-methylated phosphatidylethanolamines, mixing properties, phase separation, 171
phase separation, differential-scanning-calorimetry, *N*-methylated phosphatidylethanolamines, mixing properties, phase diagrams, 171
phase transitions, calorimetry, freeze-fracture electron microscopy, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylethanolamine, ion interaction, 181
phase transitions, phosphatidylethanolamines, specific volumes, differential scanning densitometry, expansion coefficients, volume changes, 67
phase transitions, phospholipid, cholesterol, X-ray diffraction, membranes, 147
pH dependence, phosphatidylserine, deuterium labeling, ^{2}H-NMR, hexagonal H_{II} phase, 33
phosphatidate, calcium, ionophore, alkali metals, 221
phosphatidylcholine, glycosaminoglycans, liposomes, microelectrophoresis, 1
phosphatidylcholines, ^{1}H-NMR, ^{13}C-NMR, ^{31}P-NMR, thiophosphatidylcholines, phospholipids, 99
phosphatidylethanolamines, specific volumes, phase transitions, differential scanning densitometry, expansion coefficients, volume changes, 67
phosphatidylserine, pH dependence, deuterium labeling, ^{2}H-NMR, hexagonal H_{II} phase, 33
phospholipase D, alkylglycerophospho-L-serine analogs, alkylglycerophosphoric ester analogs, fast atom bombardment mass spectrometry, cytostatic activity, 89
phospholipid, cholesterol, phase transitions, X-ray diffraction, membranes, 147
phospholipid, ether lipid, *sn*-glycero-3-phosphoethanolamine, *sn*-glycero-3-phosphocoline, ^{2}H-labeled ether lipid, ^{13}C-labeled ether lipid, 49
phospholipids, ^{1}H-NMR, ^{13}C-NMR, ^{31}P-NMR, phosphatidylcholines, thiophosphatidylcholines, 99
phospholipid bilayers, linolenic acid, docosahexaenoic acid, fluidity, fusion, permeability, 79
phospholipid vesicle formation, light scattering, 131

retinyl derivatives, electron spin resonance, spin trapping, ionyl derivatives, 73
Rhodococcus, *O*-peracetylmonomycoloylglycerol, monoacylglycerol, mass spectrometry, *Corynebacterium*, 215

salmon oil, lipid diet, corn oil, microsomal membrane, fluidity, order parameter, 25
specific volumes, phosphatidylethanolamines, phase transitions, differential scanning densitometry, expansion coefficients, volume changes, 67
spin trapping, electron spin resonance, retinyl derivatives, ionyl derivatives, 73

thiophosphatidylcholines, ^{1}H-NMR, ^{13}C-NMR, ^{31}P-NMR, phosphatidylcholines, phospholipids, 99

volume changes, phosphatidylethanolamines, specific volumes, phase transitions, differential scanning densitometry, expansion coefficients, 67

X-ray diffraction, liposomes, non-bliayer phases, hexagonal phases, freeze-fracture electron microscopy, 193
X-ray diffraction, phospholipid, cholesterol, phase transitions, membranes, 147

yeast, lipase, enzymatic resolution, 1-alleyn-3-ols, leukotrienes, 43

Chemistry and Physics of Lipids, 54 (1990) 243
